- Fits up to 4" diameter tree
- Zip two together for up to an 8" wide tree
- 5 to 8 hour drip time

Product Features

- Large fill opening
- Durable polyethylene
- Strong triple stitched lift straps
- Green colour blends with the landscape

Product Benefits

- Deep waters to the roots
- Prevents runoff
- Increases survival rate
- Works well on slopes

Consolidated Turf

ARBORRAIN™
HYDRATOR FOR TREES AND PLANTS
by A.M. Leonard

Instructions

1. Wrap both sides of Sapling Soaker bag around tree base.
2. Zip up bag. Insert hose in opening under tag and begin filling.
3. Drip holes will release water slowly after an initial squirt of water.
4. Fill bag to 1/4 capacity.
5. After bag is 1/4 full, gently lift up on green straps located at top of bag, ensuring bag is at optimal height.
6. Resume filling bag to desired level or maximum capacity.
7. Bag will be empty in approximately 5 to 9 hours.
8. Fill schedule for most trees is once per week

Handling Precautions

- Fill Sapling Soaker bag with clean water only
- If necessary, filter water through cotton cloth or hose filter
- Do not suspend and/or hang bag from straps
- Do not unzip bag when full of water
- Do not tear or rip the fill opening
- Be sure to premix water soluble fertilizers in a separate container before adding the mixture into bag

Notes

The Sapling Soaker is designed to provide proper watering for most trees when filled once a week. However, there are many factors that affect watering needs, such as plant type, soil type and weather conditions. It is best to periodically check soil moisture content and adjust fill schedule accordingly
